Stone Temple Collection

Bespoke stone temple architecture, carving and execution.

Svvayam

COLLECTION OVERVIEW

Architecture in Stone

**classical
temple vocabulary, interpreted
for contemporary sites.**

Svvayam's stone temples are conceived as complete architectural compositions – proportioned through the language of the shrine, mandapa, plinth, pillar and tower, then developed around the site, ritual movement and devotional focus. The collection brings together dressed natural stone, precise joinery, sculptural relief and restrained ornamentation to create spaces that feel

enduring, sacred and architecturally resolved.

DESIGN PRINCIPLES

PROPORTION

Balanced shrine, mandapa and vertical silhouette.

CRAFT

Stone dressing, moulding and carved relief executed as one vocabulary.

CUSTOMISATION

Dimensions, pillar geometry, roof profile and ornament adapted to the project.

**From carved components
to complete temple
ensembles.**

PROJECT 01

Stepped Shrine & Carved Colonnade

A work-in-progress study of temple massing, pillar rhythm and sculptural detailing.

STONE CRAFTSMANSHIP

The construction photographs document the architectural logic before completion: individual pillar members are carved, proportioned and assembled as part of a unified system. Dressed grey granite is finished to retain its natural grain while the relief carving remains crisp and legible.

DESIGN CONCEPT

The composition develops around a compact sanctum crowned by a stepped stone tower, with a disciplined perimeter of carved pillars establishing procession and enclosure. Square and faceted shafts, lotus bands, floral medallions and moulded bases create depth without overwhelming the primary geometry.

PROJECT 02

Compact Stone Shrine with Open Mandapa

A compact shrine is extended by a front stone mandapa, creating a measured transition from the approach to the inner devotional space. The pavilion uses square stone pillars, layered capitals and a restrained roof edge, allowing the mass of the sanctum to remain visually dominant. The natural grey finish reinforces the monolithic character of the architecture, while shallow carving adds sacred detail at

CHARACTER Human scale. **quiet, grounded and proportion-led.**

Svvayam

PROJECT 03

White Stone Temple with Layered

A restrained temple composition defined by clean stone planes and a precise roof silhouette.

ARCHITECTURAL LANGUAGE

The temple is articulated through a clearly layered base, wall and upper tower, with an open entry porch that extends the sacred threshold. The pillar treatment is deliberately restrained: shallow floral squares, compact brackets and clean stone faces keep the emphasis on proportion.

MATERIAL & FINISH

A pale, finely dressed stone finish amplifies light and shadow across the mouldings. Minimal surface variation allows the carved details and stepped roof profile to read sharply from a distance.

CUSTOMISATION

The same architectural system can be proportioned around different sanctum sizes, porch depths, pillar counts and levels of carving while retaining a coherent traditional vocabulary.

**Light,
disciplined,
timeless.**

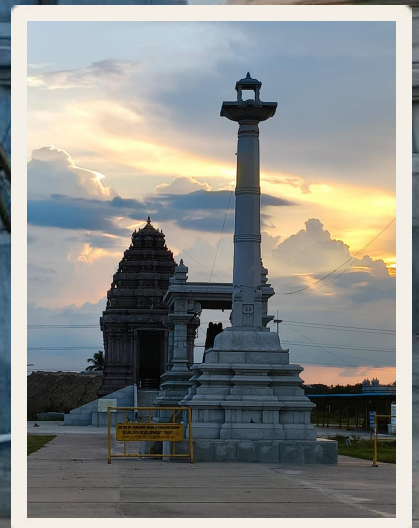

PROJECT 04

Nandi Mandapa & Deepastambha Ensemble

This ensemble is composed as a ceremonial sequence rather than a single object. A raised Nandi mandapa anchors the foreground, while the tall deepastambha establishes a vertical axis against the sky. Layered stone plinths, carved square pillars and a strongly moulded roof create monumentality through proportion rather than excessive ornament.

The result is an outdoor sacred precinct with clear hierarchy, long distance presence and a calm, enduring stone character.

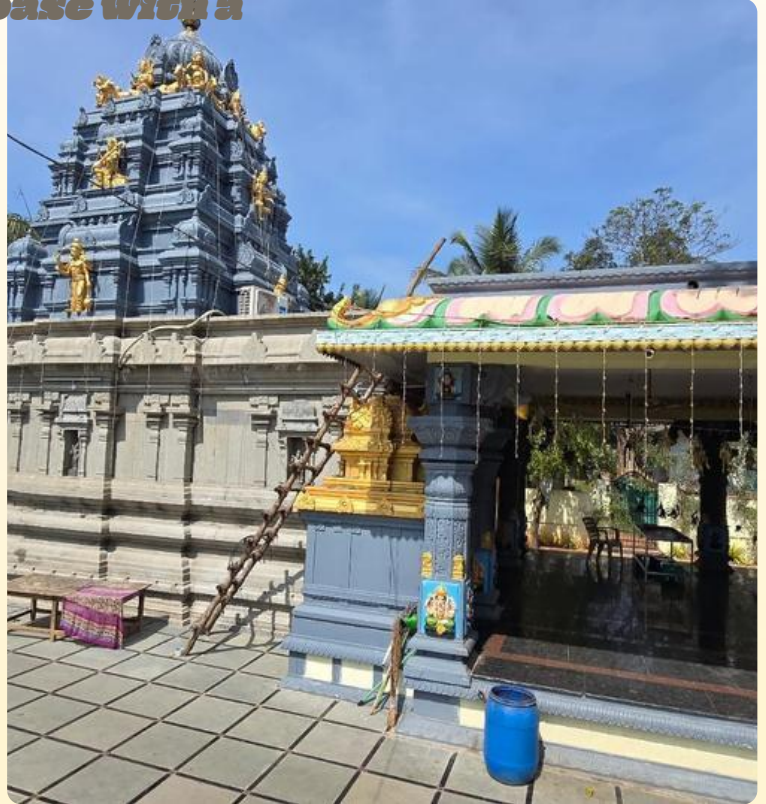

PROJECT 05

Gopuram-Crowned Temple Complex

A stronger vertical expression combining a carved stone base with a sculptural tower.

Ceremonial presence with architectural discipline.

DESIGN CONCEPT

The main shrine is given a more pronounced gopuram silhouette, with repeated horizontal tiers, projecting cornices and sculptural deity accents forming a highly visible sacred marker. The lower stone architecture remains ordered and robust, providing a calm base for the more expressive tower above.

CRAFT & DETAIL

- Pilasters, framed niches, moulded cornices and carved bands are
- coordinated as one elevation. The combination of natural stone and
- selective colour or gilded accents allows the tower to gain ceremonial
- emphasis while the core architecture retains its stone permanence.

PROJECT 06

Open Stone Mandapa

A spacious pavilion defined by column rhythm, broad roof planes and carved threshold details.

SPATIAL CHARACTER

The open mandapa is conceived as a shaded ceremonial room in stone. Broad roof slabs rest on a regular grid of square pillars, each detailed with compact floral blocks, sculptural lower reliefs and layered pedestal mouldings.

FINISH

- A consistent natural grey finish keeps
- the pavilion visually calm, allowing
- scale, light, shadow and carving depth
- to create the experience.

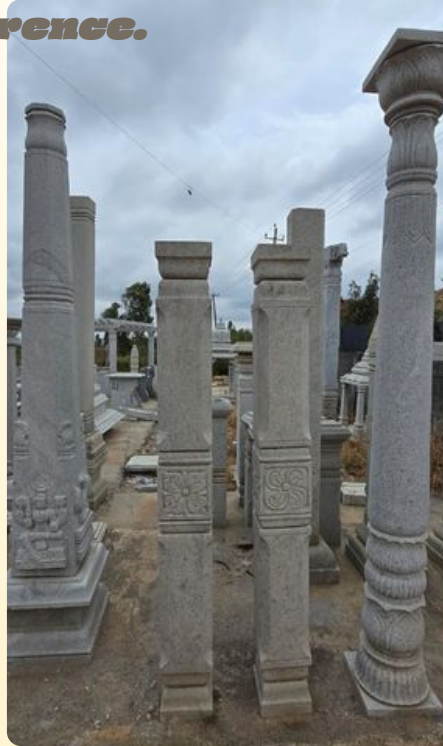

**Architectural,
open and deeply
grounded.**

CRAFT & CUSTOMISATION

A Vocabulary Built Around the Project

Traditional elements can be calibrated in scale, depth and ornamentation without losing architectural coherence.

**PILLAR GEOMETRY**

Square, faceted, octagonal, fluted or selectively turned profiles, proportioned to the roof and plinth.

TEMPLE FORM

Compact shrines, open mandapas, stepped vimanas, gopuram expressions, deepastambha ensembles and processional thresholds.

CARVING LANGUAGE

Lotus bands, floral rosettes, temple niches, symbolic reliefs and moulded borders in restrained or enriched treatments.

PROJECT FIT

Dimensions, platform heights, pillar spacing, roof profile and the density of ornament can be developed around site and devotional requirements.

Every detail is developed to belong to the whole.

Every stone
tells a story.

Every temple
becomes a
legacy.
